

F1 Daisy

The Daisy model is a good choice for those of us who don't want to be connected to social media platforms all day long. The Daisy model strikes a good balance for many of us who don't want social media influencing our lives, but still want to keep in touch and foster real relationships with the important people in our lives.

In touch

With the extremely accurate optional Voice-to-Text dictation service powered by Microsoft, texting on a flip phone can be an awesome experience. While it's rather small, you might like trying the full QWERTY keyboard on the touchscreen too.

Free of distractions

Without any social media apps to distract you and use up your valuable time, the Daisy will allow you to escape all the noise and hype, but still allow you to keep in contact with family and friends.

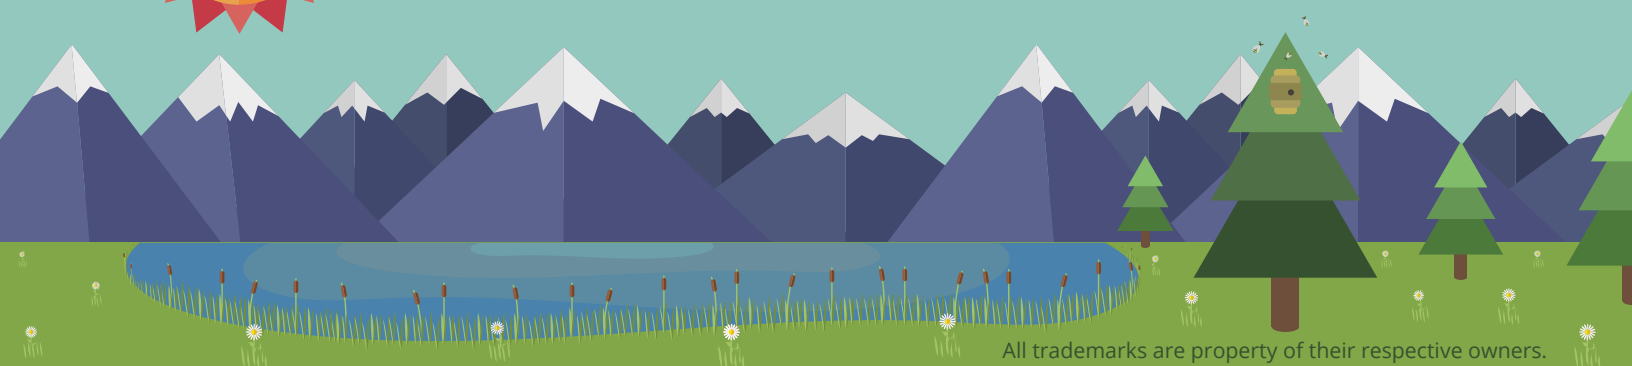

Actually talk on the phone

With the large, user-friendly buttons and clean interface, the Daisy model is very easy to use. With the extra-loud handset speaker and hearing aid support, it is the perfect choice for you to pick up the phone and reconnect with an old friend.

Security conscious

The SOS function on the Daisy allows you to signal for help quickly, which can be useful for children or the elderly.

Daisy features

The Daisy model is in the classic flip-phone format, which is great for calling. In addition to this, it supports advanced texting with a handy voice-to-text input option, QWERTY keyboard, and even a full emoji palette.
